THE MENACE FROM TRITON

SANTIAGO ONTAÑÓN 2020

Requirements:
- MSX1 computer
- 16KB RAM

ROM size: 48KB

Designed for 60Hz machines.

Pause: F1

Power up: M or B2

SPACE or B1: Press to fire. Hold for special/slow down

Move ship

Holding fire halves the speed of the ship. Use this for difficult maneuvers!

Collect power pellets to power up the ship.

Power pellets advance the currently selected power-up. Press the secondary button to activate it!

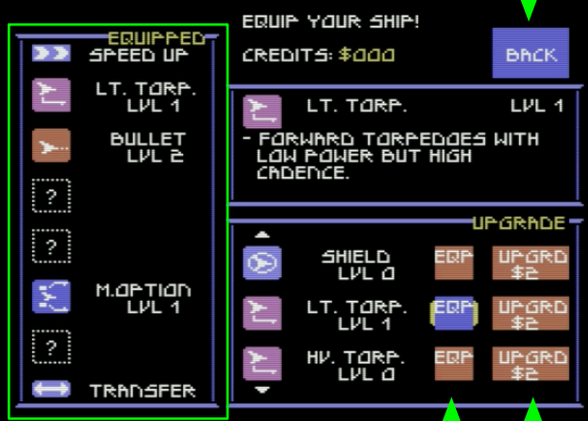
If your energy bar is full, you can activate your weapon special by holding fire.

If you run out of pilots, the mission will be over!

Transferring power pellets to credits will allow you to buy upgrades later.

- Planet color indicates its type.
- Complete a planet to capture it.
- You can only attack planets connected to those you have already captured.
- You will need to find all three maps to cross Aigai Nebula.
- Defeat the final boss in the Triton planet to complete the game!
- Planets become harder the closer to Triton you reach. Make sure to upgrade your ship appropriately!

You can press ESC or the secondary button to exit the upgrade screen at any time



The left-side of the screen shows the currently equipped upgrades.

Buy upgrades, and then equip those you want to use in the next mission.

- At game start, your ship is very weak, and your fire rate is very low.
- Collect credits during your missions, and use them to upgrade.
- Do not forget to equip upgrades after buying them!
